AFTER CARE WORKSHEET

Catheter Removal

You may experience some of the following situations:

Blood in your urine:

This is normal for the first 24 hours after this procedure

Tenderness with urination.

DRINK LOTS OF WATER after your catheter is removed.

At least one 16 oz glass per hour, until you urinate.

Please Call the Office if you are having the following:

Call the office if you have not urinated within 4 hours of having the catheter removed, the catheter will need to be re-inserted.

When you call, the nurse will let you know when to come to the office to have your catheter re-inserted.

Please call prior to 3 pm, so the staff will be available to re-insert the catheter.

Follow Up Appointment

If a follow-up appointment is needed, your appointment will be scheduled prior to leaving the office.
